Ultrasonic Diffusers

The Ultrasonic diffusing features ensure the integrity of the essential oils' beneficial molecular structures and allow for easy bodily absorption.

The ADVANCED Ultrasonic Diffusing technology which produces vibrations at a frequency of 3 million times per second breaks the water and essential oils into extremely fine micro-particles without using heat.

Our RED POMEGRANATE DIFFUSER with BLUETOOTH SPEAKER offers a lightweight replica design of the pomegranate fruit with a weight of only 635g and a tank capacity of 100ml. It is available in classy red and gold colours. The diffuser automatically turns off when the water level is lower than the induction piece – the machine senses the water shortage. The diffuser will stop diffusing and lighting and go into standby mode. Repeat the steps to start misting again.
